de la Méditerranée

« In the 12th century, a priory was installed in this place; From the 15th century it was attached to the abbey of Boscodon; The chapel was damaged by Protestant troops in 1574 and rebuilt in the 17th century; The date 1700 is engraved on the carpentry of the west door; In 1818, date painted on the vault, it was restored and adorned with a painted decoration; Was it on that date that the gable walls were raised and the bell tower redone?... »

« time » concept

in the cultural heritage discourse  
evolution, transformation, reuse, status

- historical analysis
- reasoning task

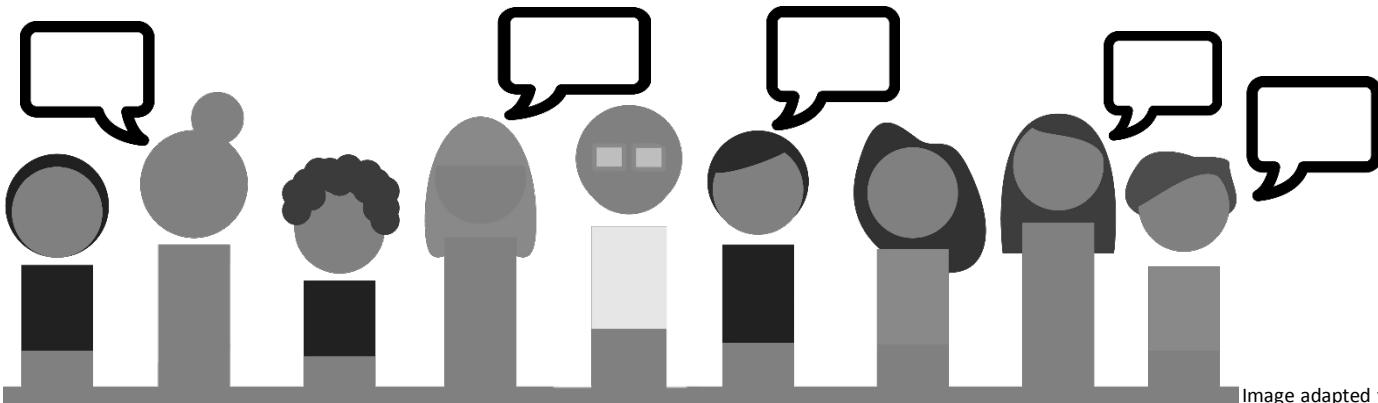

Image adapted from: <https://www.essrg.hu/en/sparks-citizen-science/>

in the CH discourse past events or facts are anchored in time in **a large variety of forms**:

[...] it goes back to the second half of the 13<sup>th</sup> or 14<sup>th</sup> Century.

[...] after the Revolution.

Around 1260 it was restored [...]

It already existed in 1613 [...]

In 1706: [...] built for more than 60 years ago.

...

*do not fit "classical" quantification systems.*

} There is a need to **identify** and *if possible to formalise* the way past events are *reported*, the way temporal hints are *worded*.

The idea behind this research is to **understand** and **depict** in a **structured and sharable manner** the **nature** of the temporal statements used as historical evidence.

*The approach is:*

- a comprehensive analysis
- a **formalization** targeting reasoning tasks on **verbalization patterns**
- the extraction of temporal hints
- an experimental implementation using the OWL (Web Ontology Language).

helps reaching a **formal model of time "as it is worded"**

could renew **the way wording patterns can be correlated with factors** such as historical period under scrutiny, type of CH element documented, type of source, point of view (or discipline) of the information provider, etc...

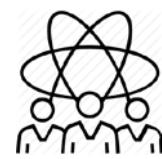

highlight **particular tendencies of wording** in the CH discourse and focus on typical challenges

can give heritage specialists **means to compare** and discuss their different interpretations

*Not a generic ontological framework* considering dependency on distinctive parameters

- region, typology, collection

TIME community

&gt; theories, logics, representation languages, reasoning

ISO 8601

&gt; presenting dates and times

ISO 19108

&gt; interchanging of temporal information

TimeML

&gt; NLP tasks for creating controlled temporal expressions

OWL-Time

&gt; expressing facts about topological relations

CIDOC CRM (21127)

&gt; core ontological model in CH

research direction

- extending regular time concept to a wider **non-absolute perspective**
  - (e.g., qualitative expressions, recurrent events, diverse granularities)
- **temporal reasoning** in the context of supporting AI applications

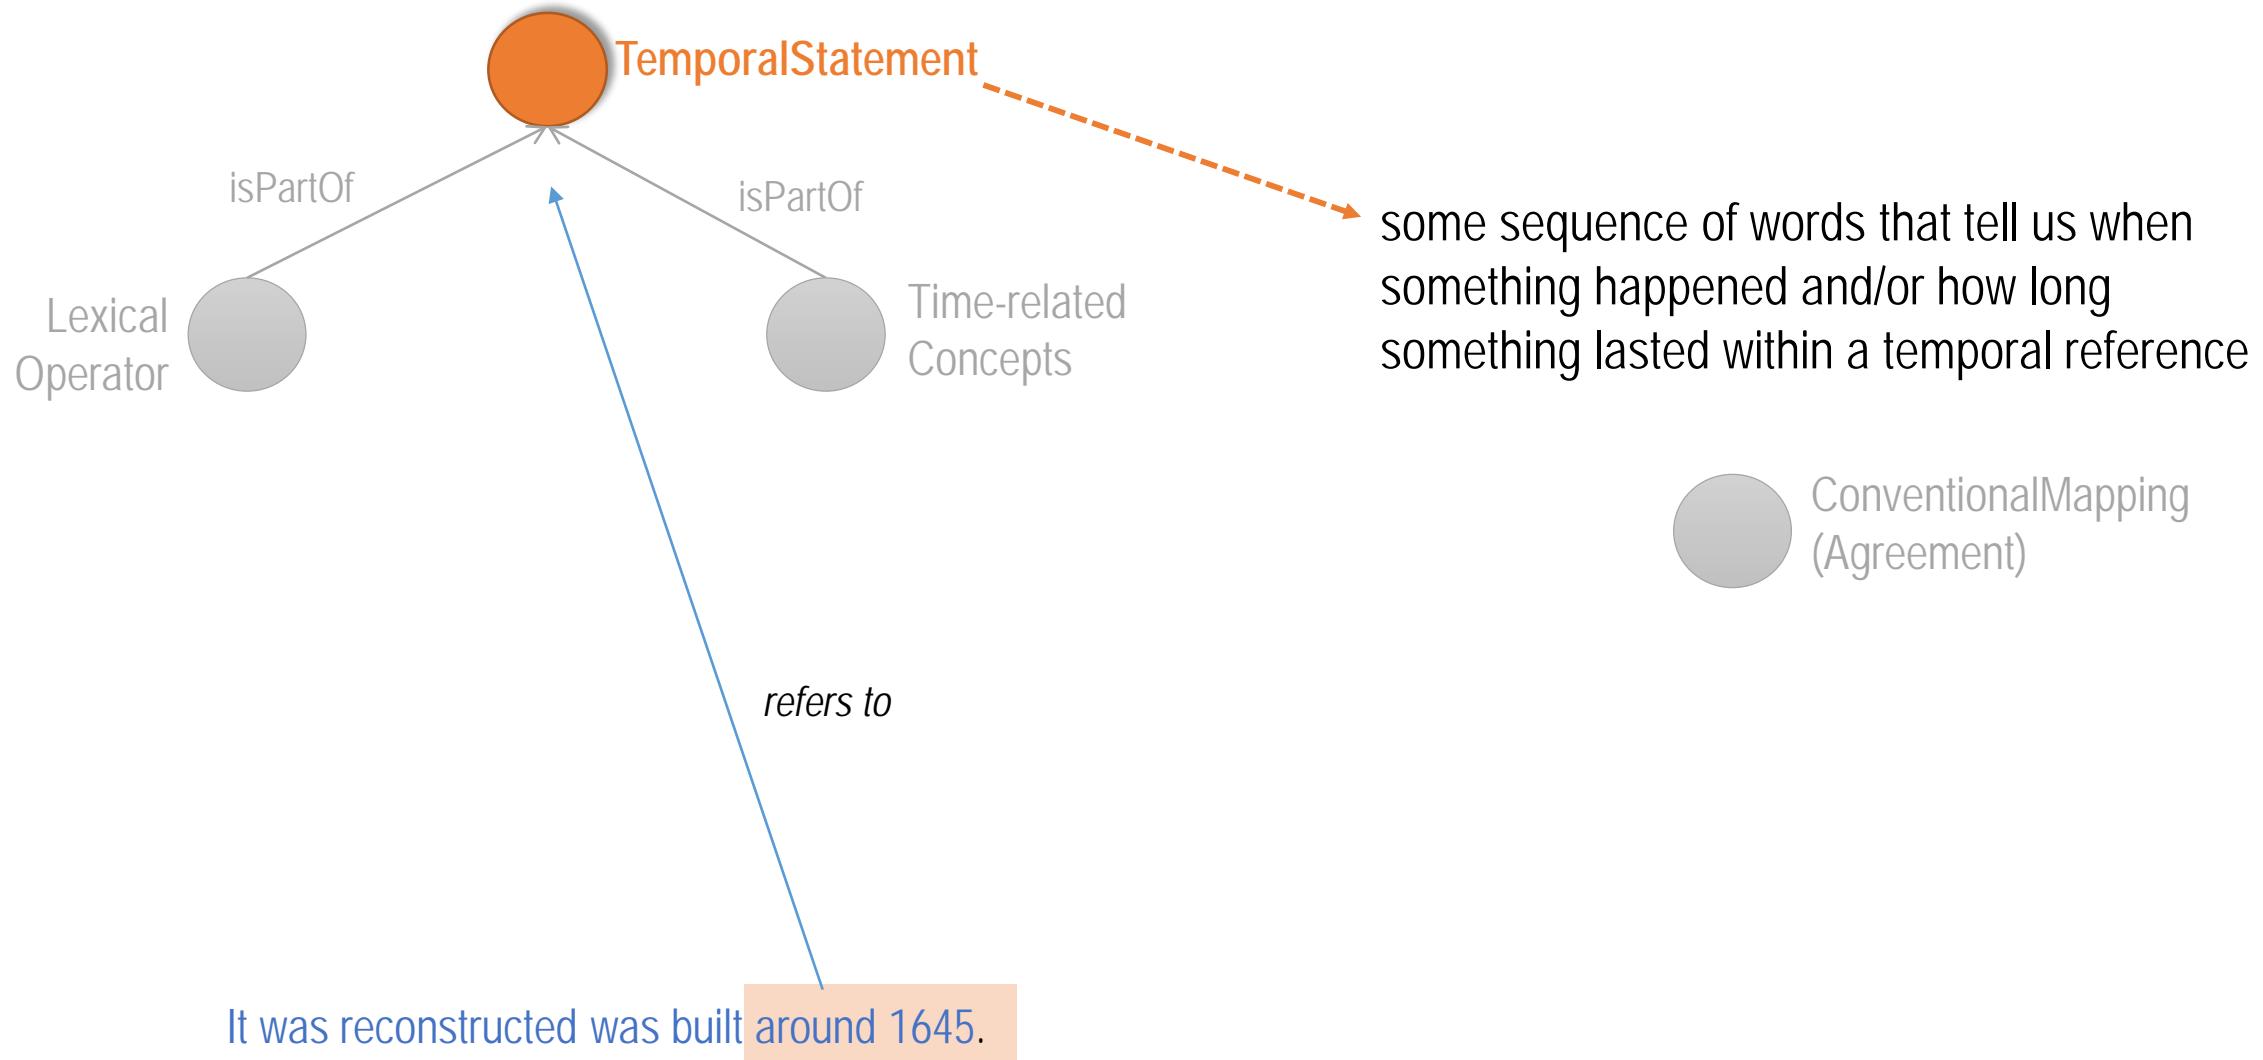

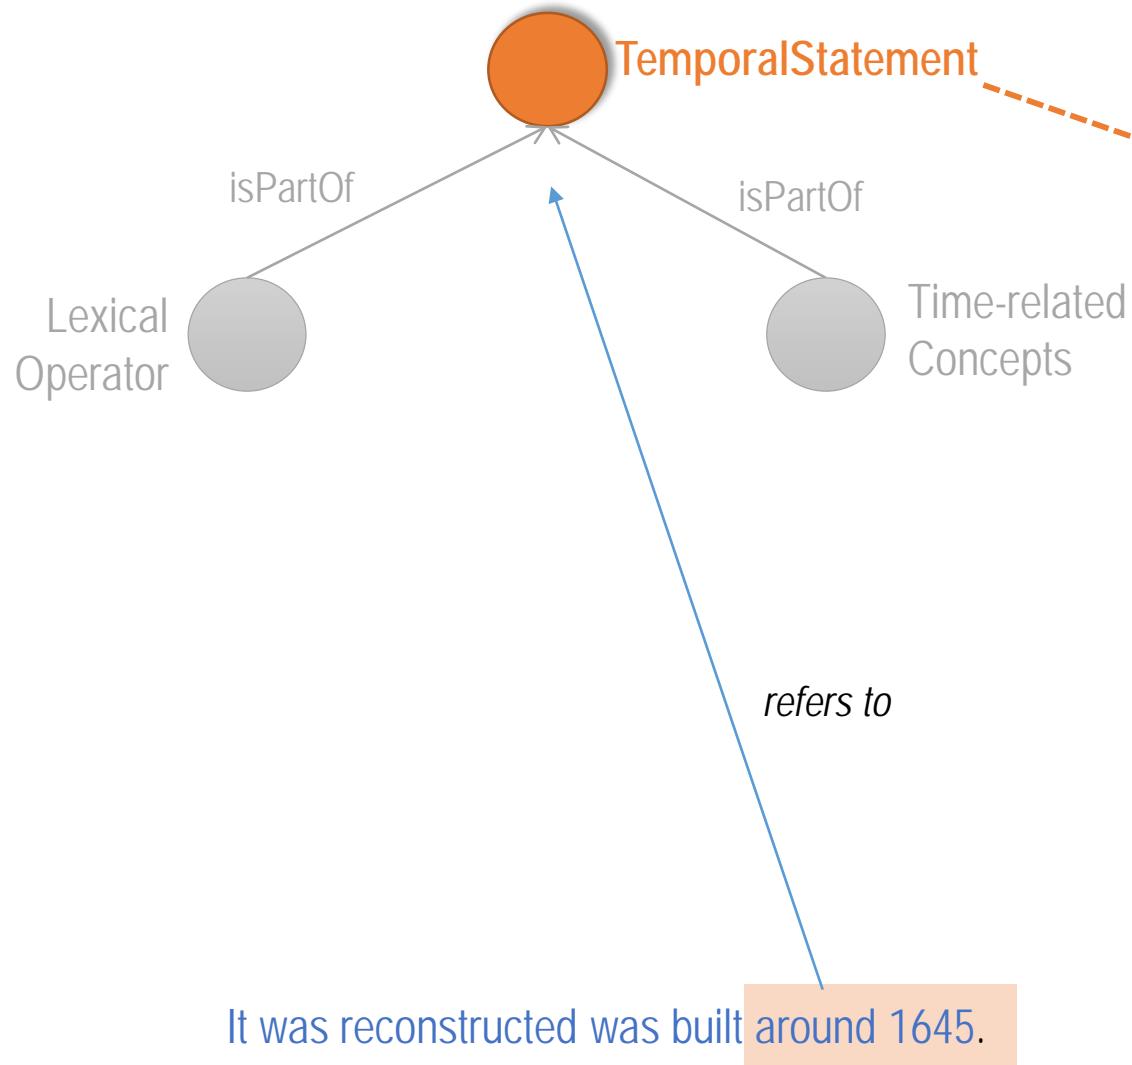

A comprehensive basis in forms of a complete formal model  
a priori to efficient temporal reasoning

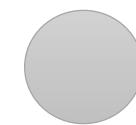

objective

- extraction for temporal statements (quantitative values and lexical modifiers)
- uncovering their structure
- fine-grain analysis of temporal expressions

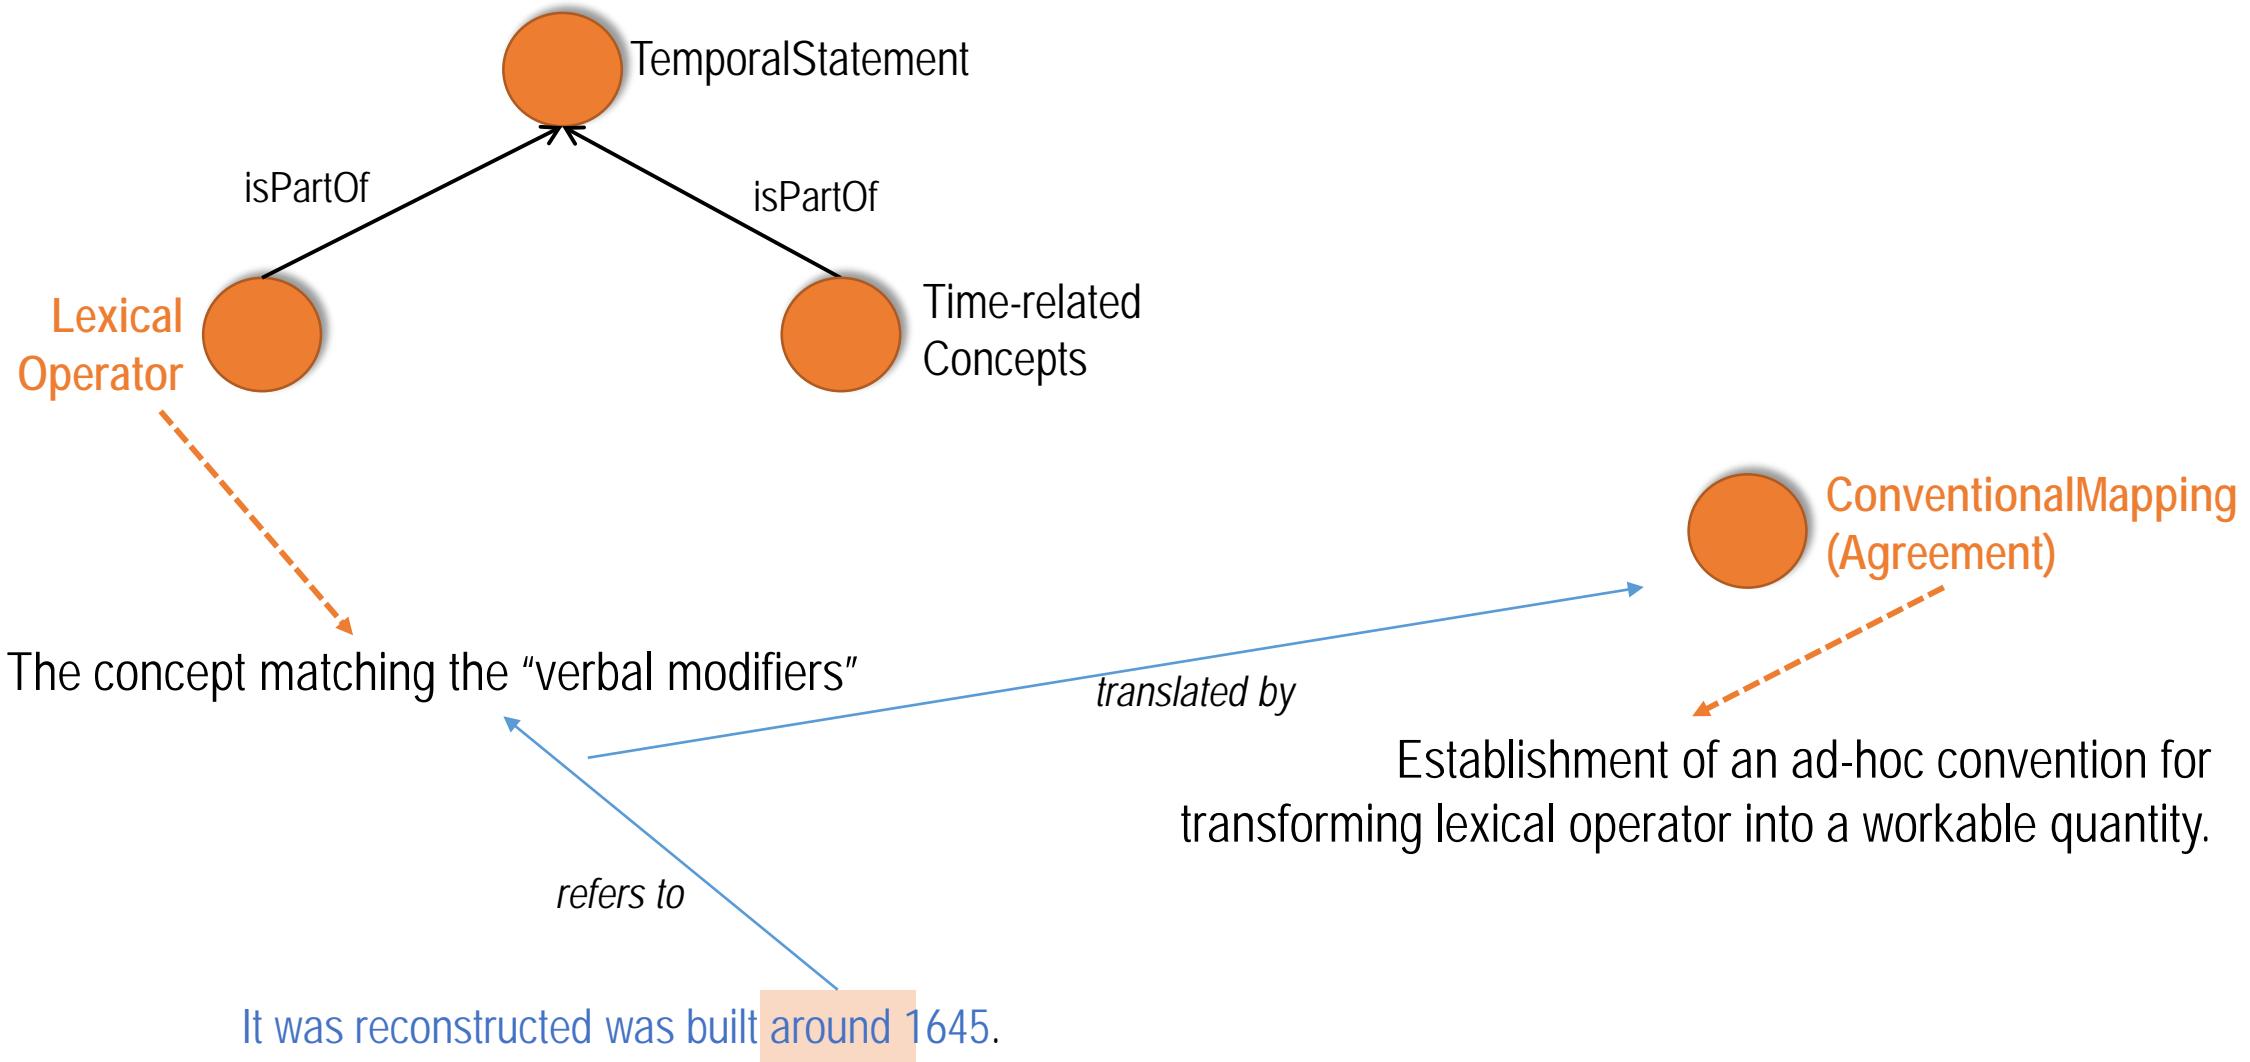

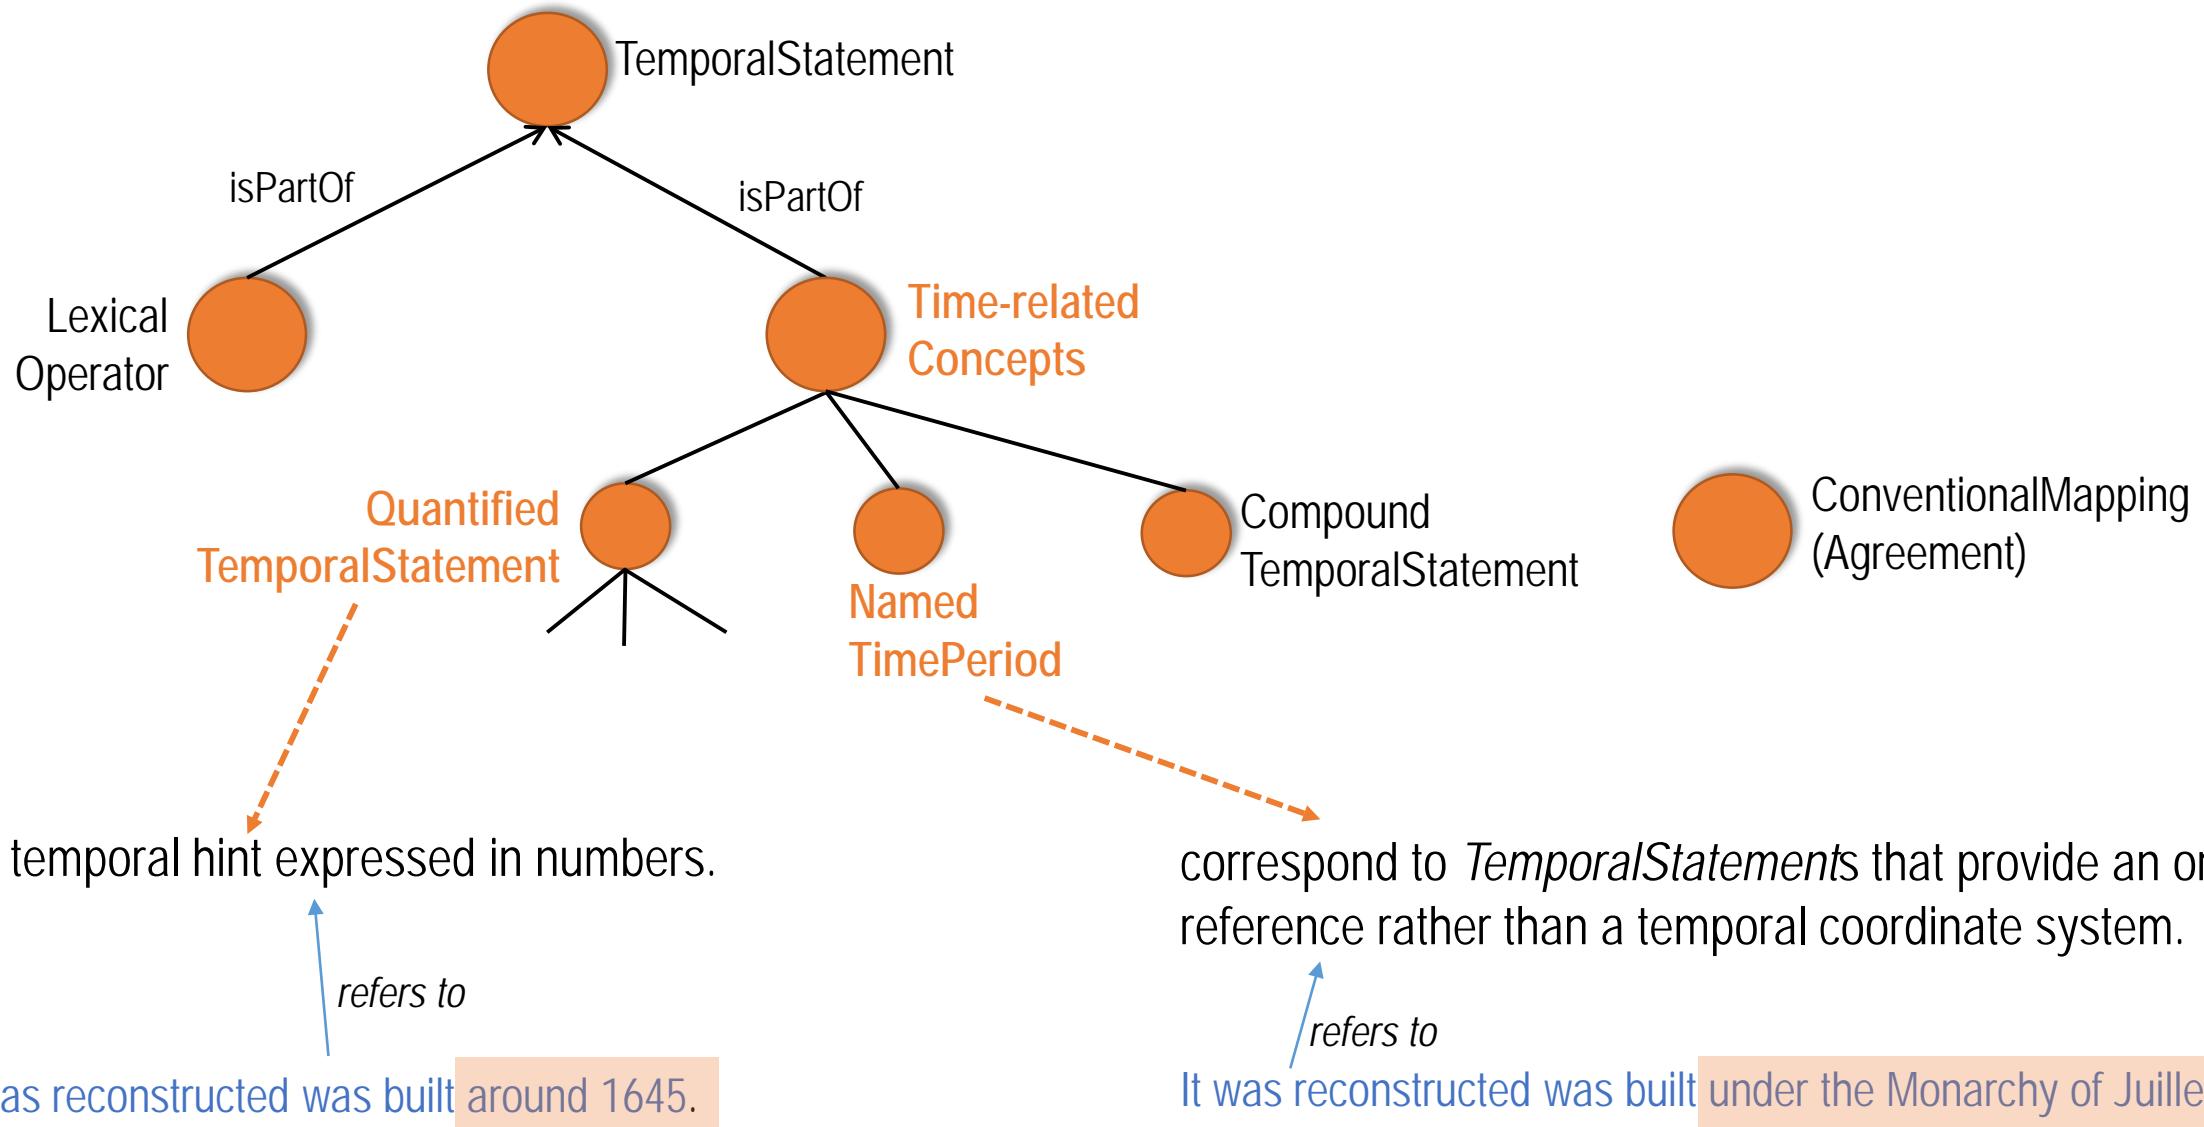

some sequence of words that tell us when something happened and/or how long something lasted within a temporal reference

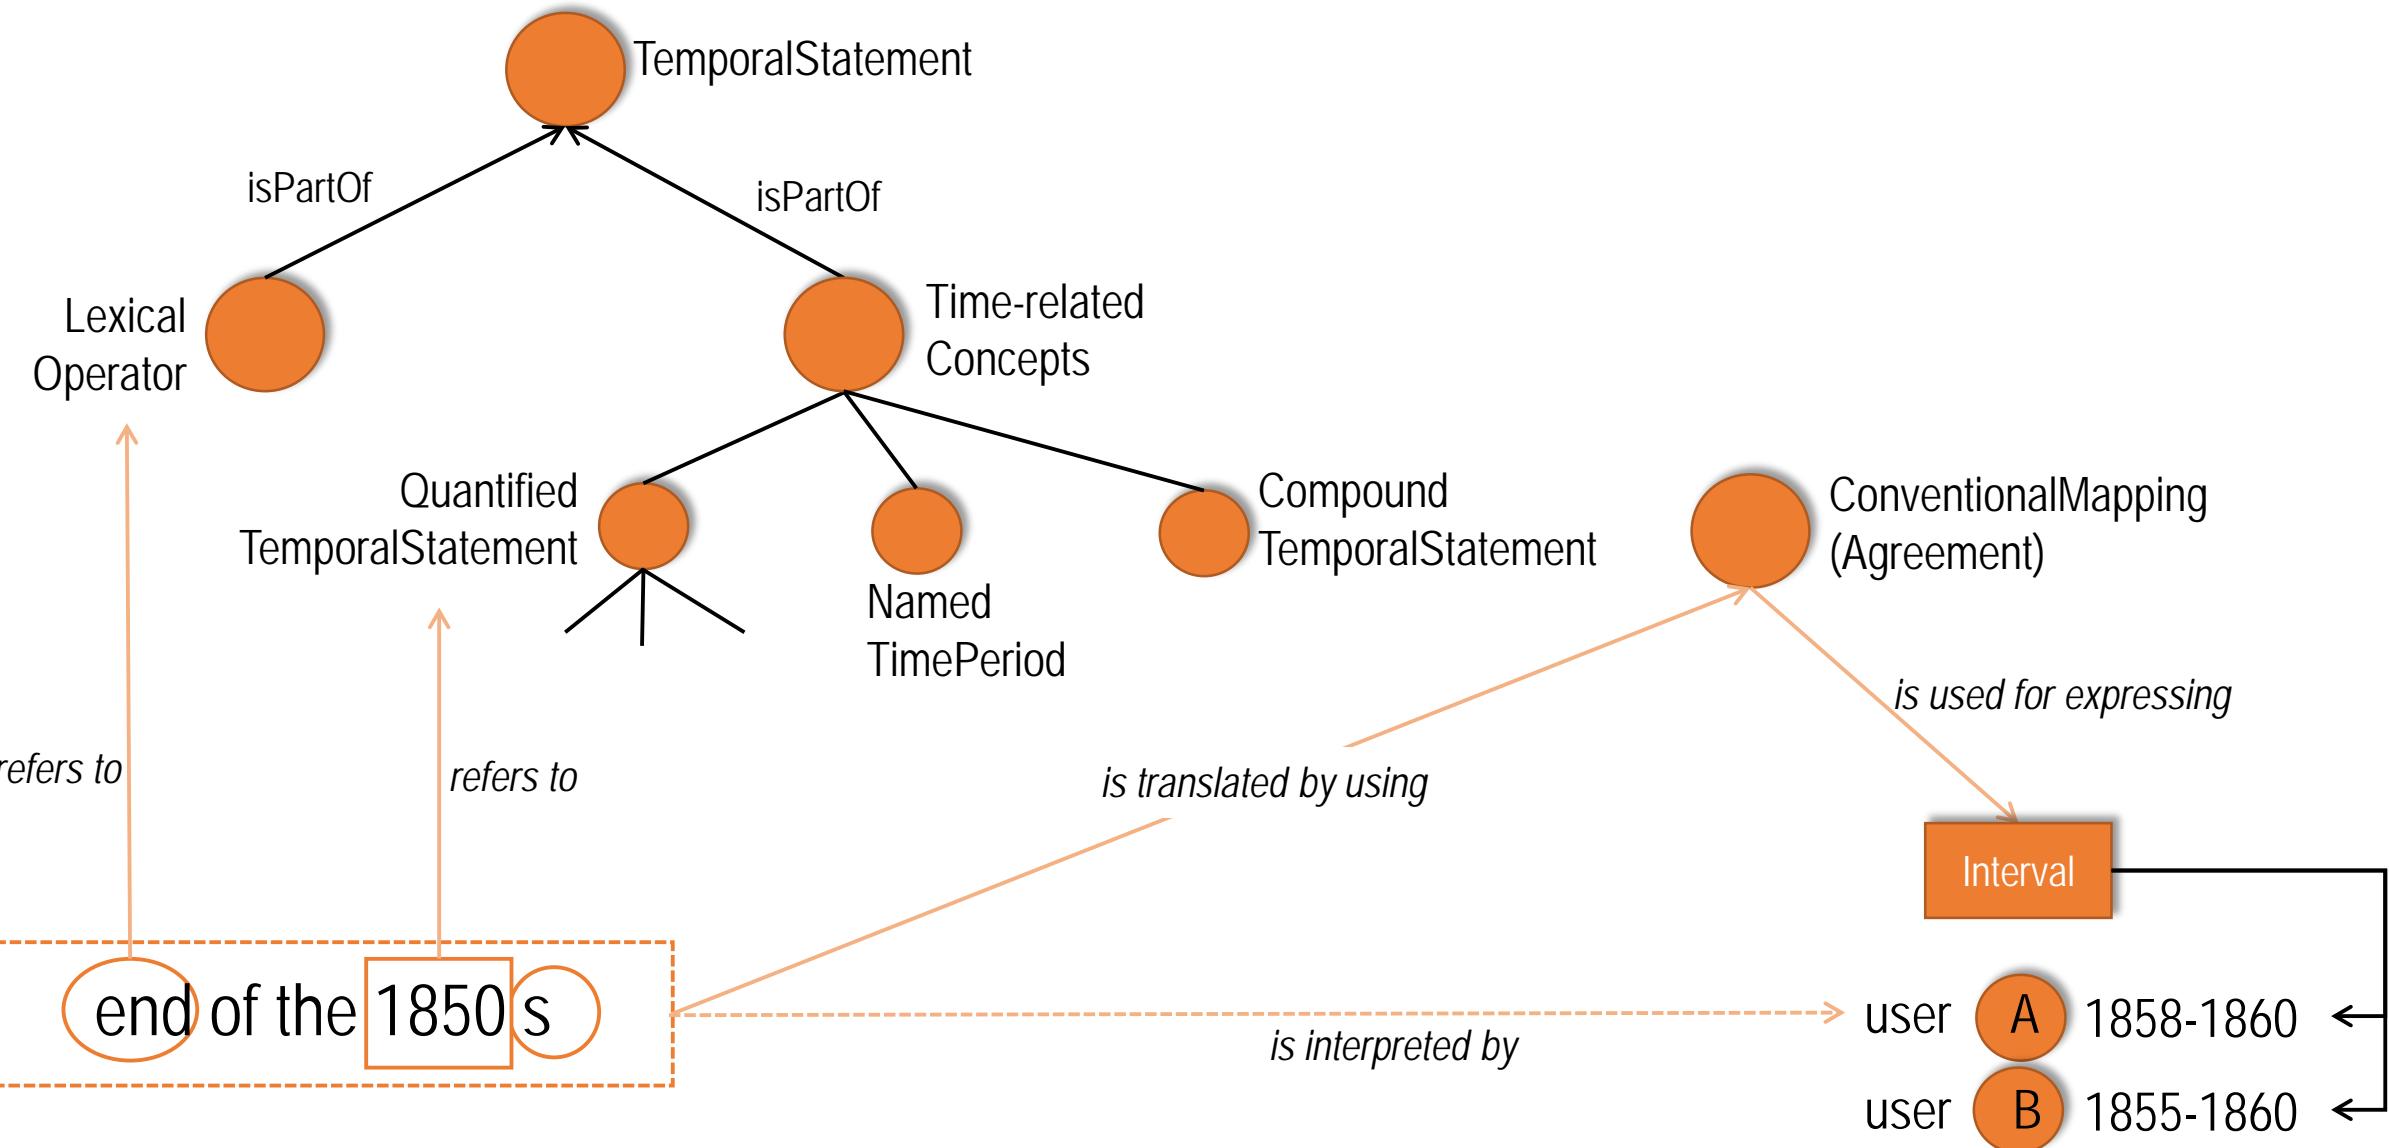

ConventionalMapping  
(Agreement)

- **granularity**
  - The first quotation dates back to 20 April 1687
- **chronon**
  - A great fire damaged the building extensively in the winter of 1920

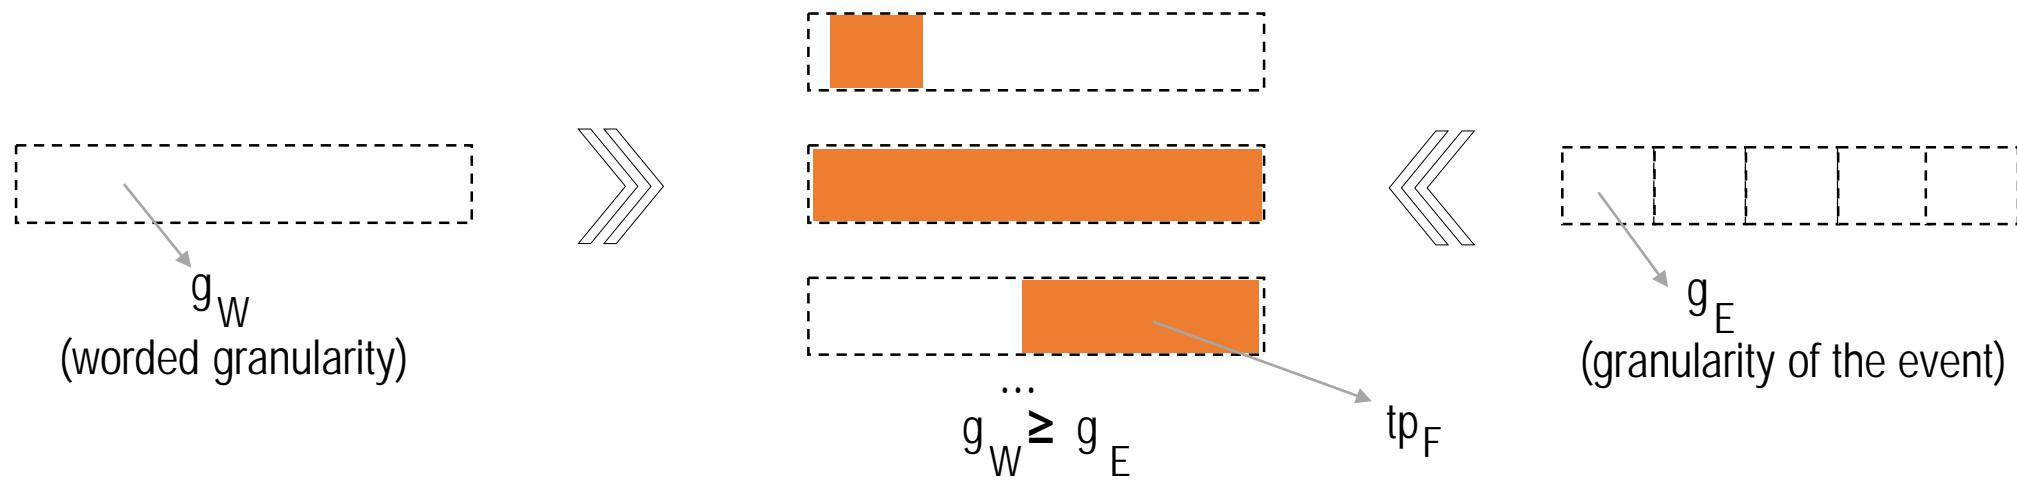

## TimePoint

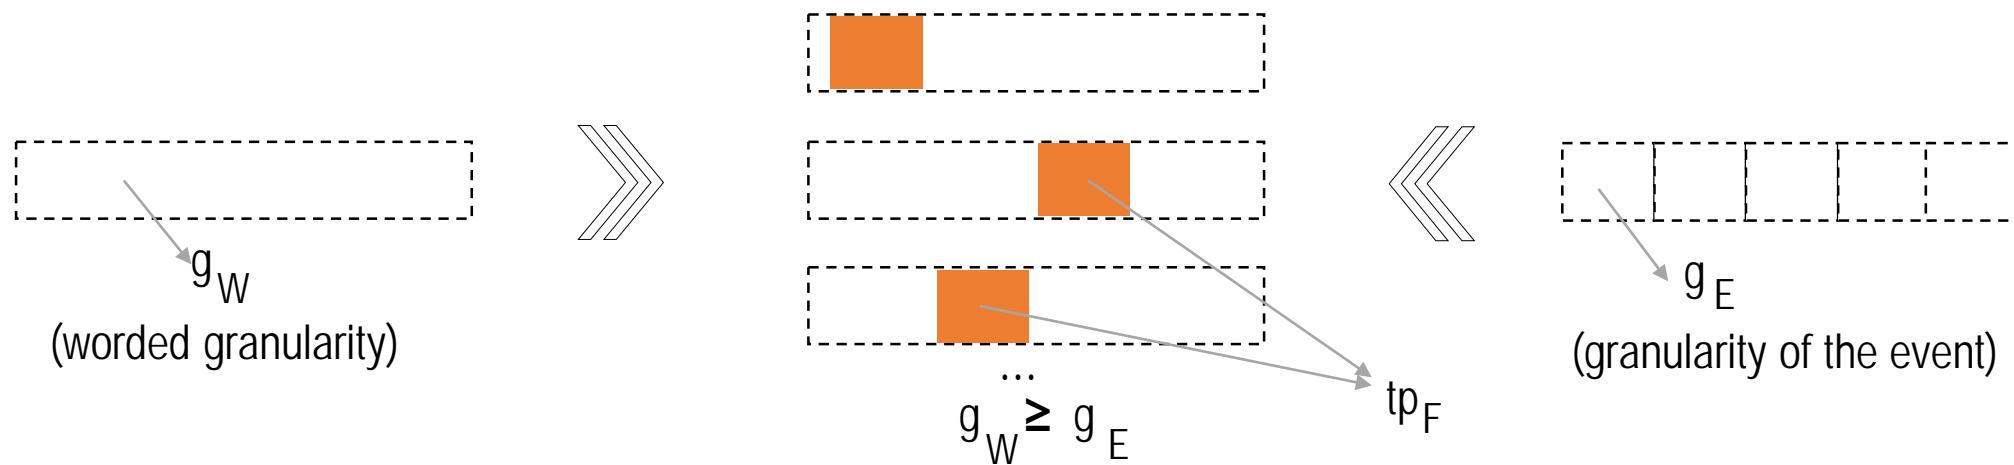

*FuzzyTemporalStatement* ( $tp_F$ ) is a wording that refers to an event confined in an ambiguous way to a *TimePoint*.

Example: *Elle a été reconstruite au milieu du 18e siècle.* // It was rebuilt in the middle of the 18<sup>th</sup> century.

## TimePoint

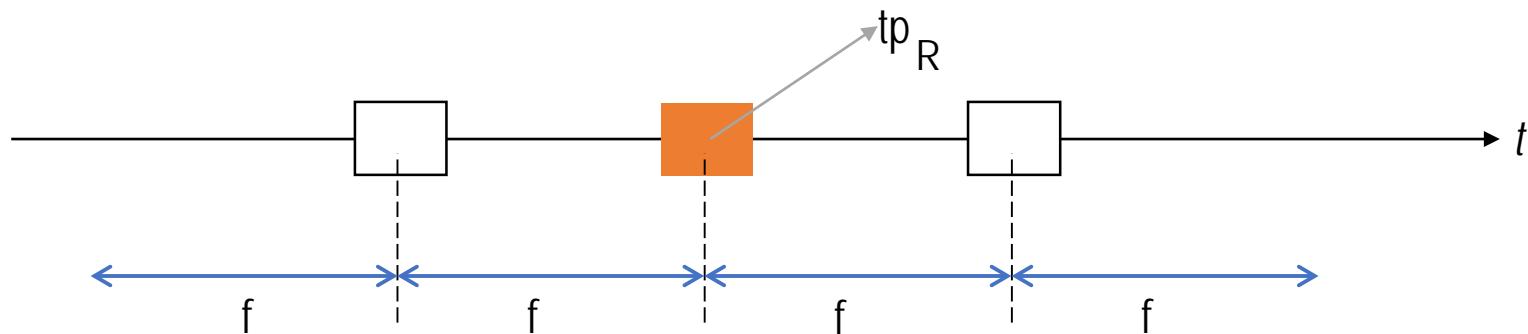

*Unfoldable Temporal Statement* ( $tp_U$ )

**Example:** *La toiture a été emportée par l'avalanche de 1978.* // *The roof was washed away by the 1978 avalanche.*

## TimePoint

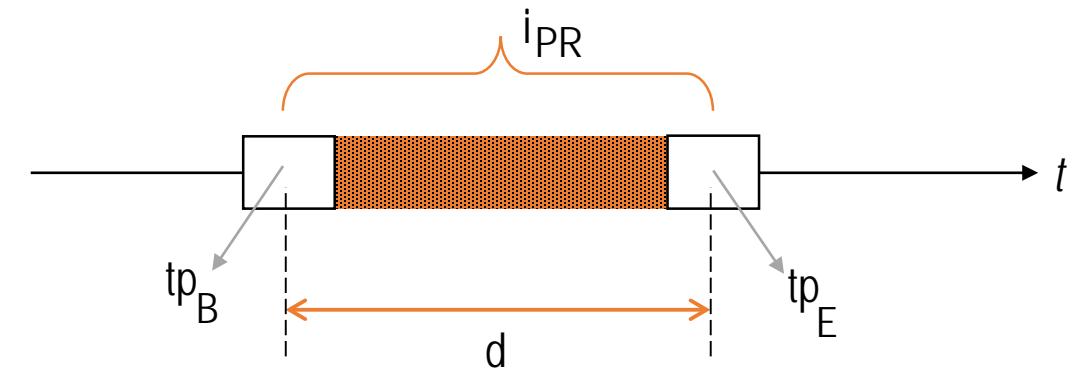

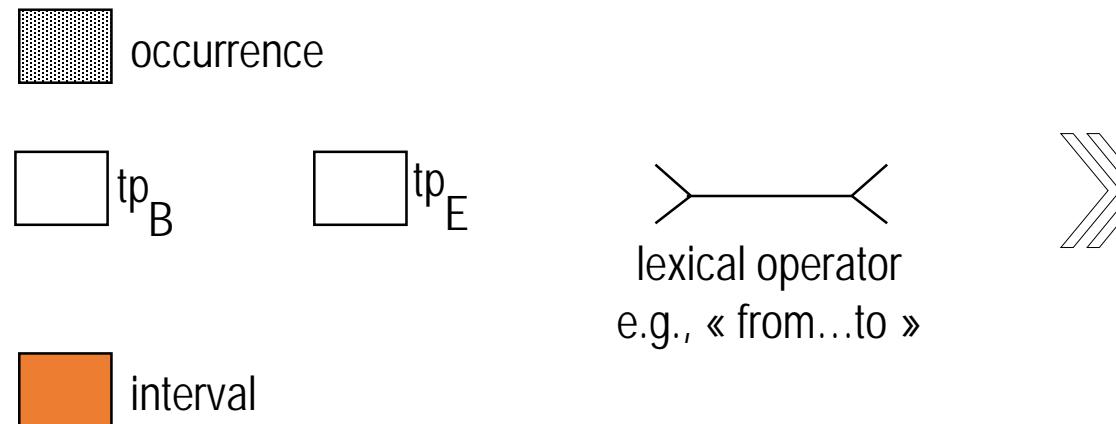

*RecurrentTemporalStatement* ( $tp_R$ ) is dedicated to *TemporalStatements* for periodic/cyclic occurrences.

Example: *Aujourd'hui, Notre-Dame-de-Vie fait toujours l'objet d'un pèlerinage annuel le 15 août.*  
 Today, Notre-Dame-de-Vie is still the subject of an annual pilgrimage on August 15th.

## Interval

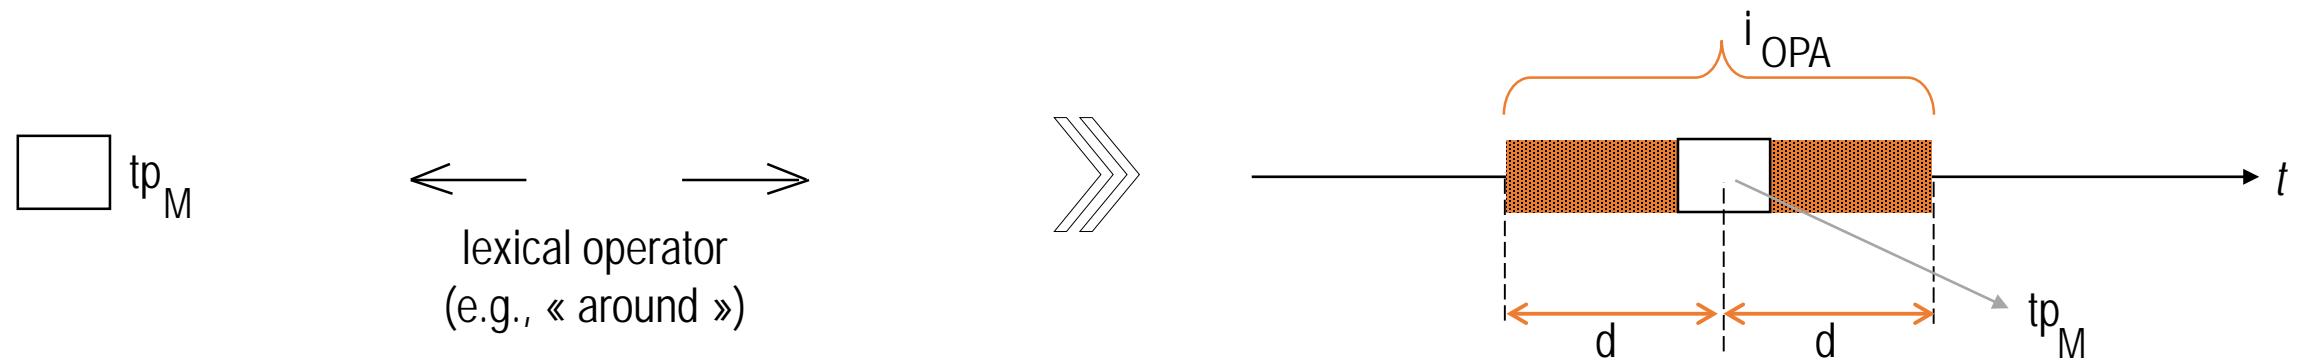

*ProperIntervalStatement* ( $i_{PR}$ ) is a wording corresponding to an *Interval* expressed with 2 *TimePoints* (beginning boundary  $tp_B$ , and end boundary  $tp_E$ ).

Example: [...] *Bâti en pierre entre 1815 et 1825. // [...] Built in stone between 1815 and 1825.*

## Interval

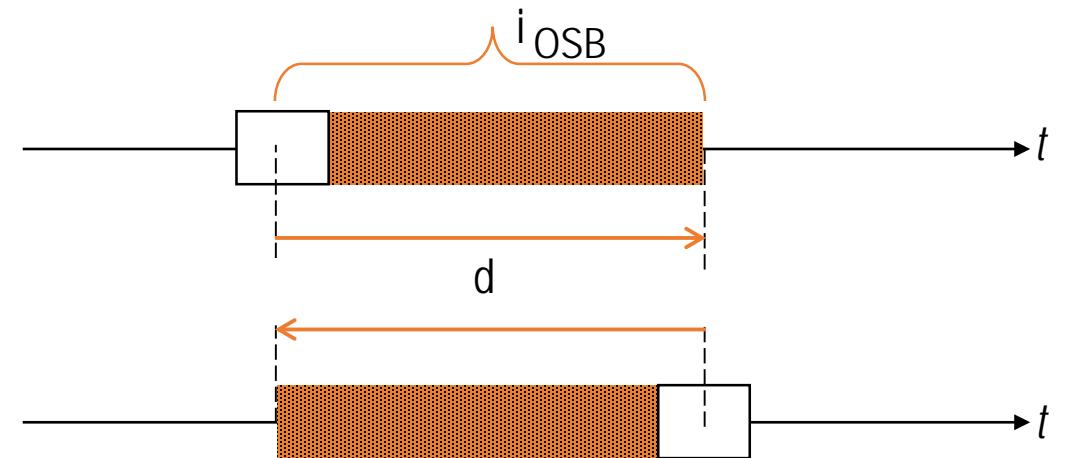

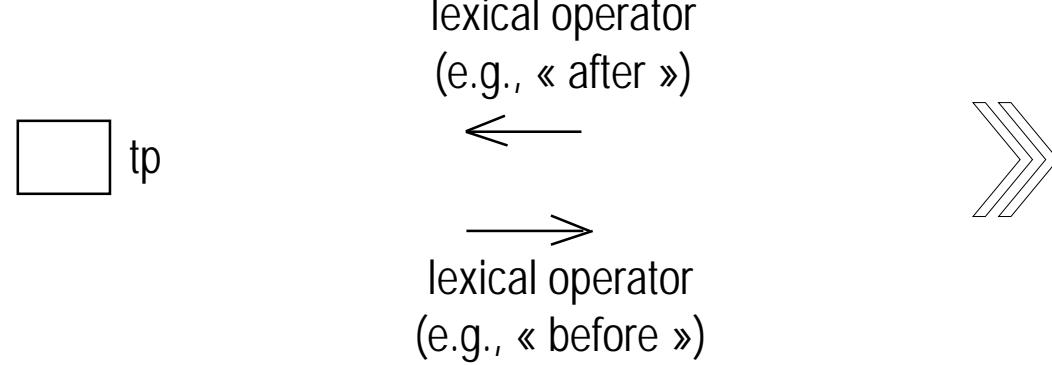

*OnePointAnchoredIntervalStatement* ( $i_{OPA}$ ) is a wording that refers to an occurrence expressed by a *TimePoint*, and accompanied by a *LexicalOperator* such as "around".

Example: *Bâtiment actuel édifié autour de 1645.* // Current building was built around 1645.

## Interval

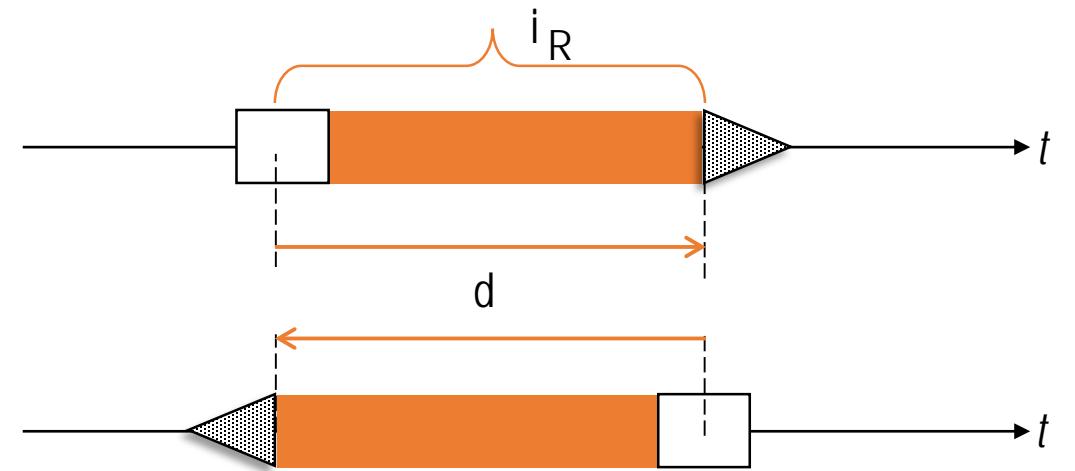

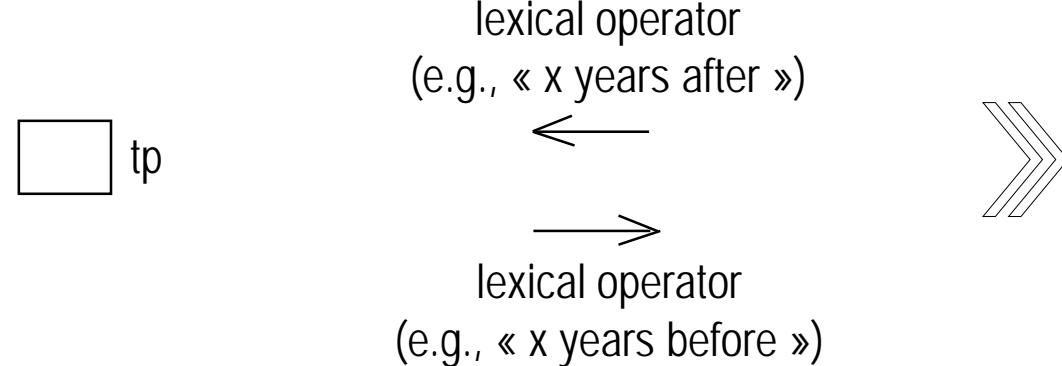

*OneSideBoundedIntervalStatement* ( $i_{OSB}$ ) is a wording that refers to an occurrence expressed by a *TimePoint* (tp), and accompanied by a *LexicalOperator* such as "before" or "after".

Example: *Elle a été construite après 1720 par souscription publique.* // *It was built after 1720 by public subscription.*

## Interval

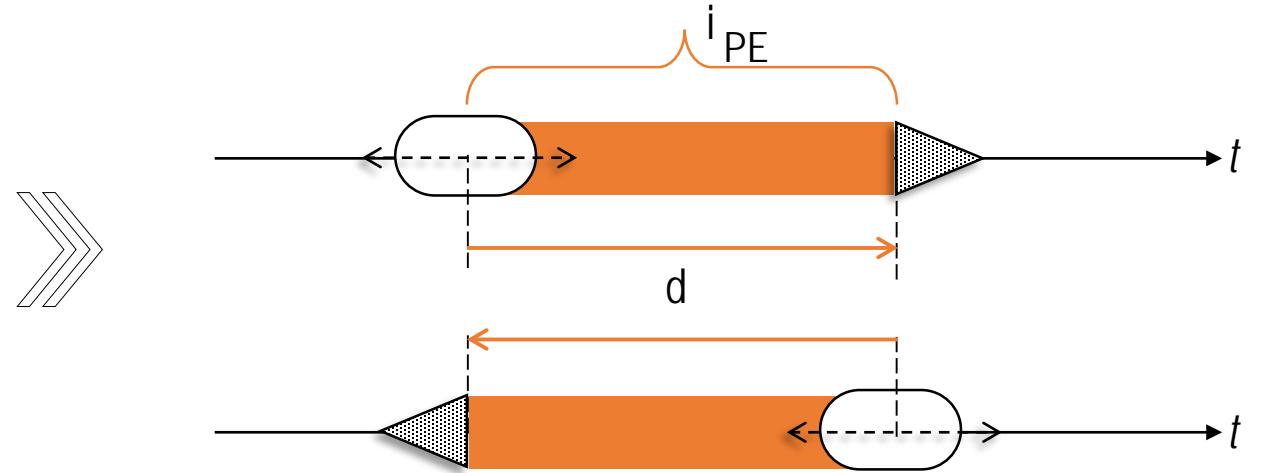

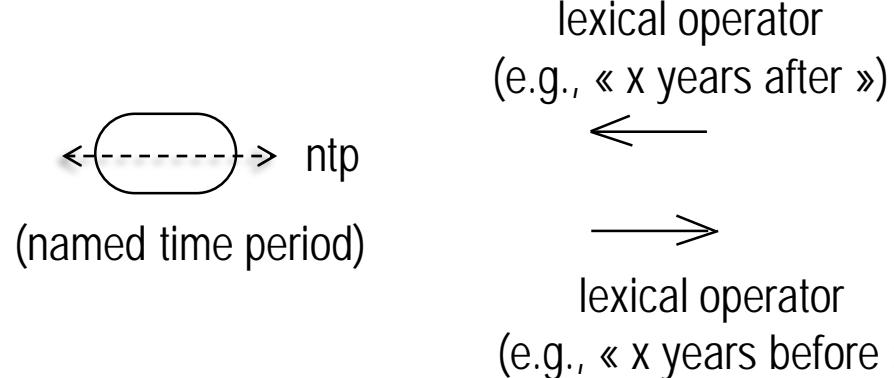

*RelativeIntervalStatement* ( $i_R$ ) is a wording where a *TimePoint* is used to anchor an occurrence located at a distance in the past or in the future of the *TimePoint*.

Example: *en 1706: la chapelle ste Anne au hameau appellé Toron, bâtie depuis plus de 60 ans.*  
*in 1706: Ste Anne's chapel in the hamlet called Toron, built more than 60 years ago.*

## Interval

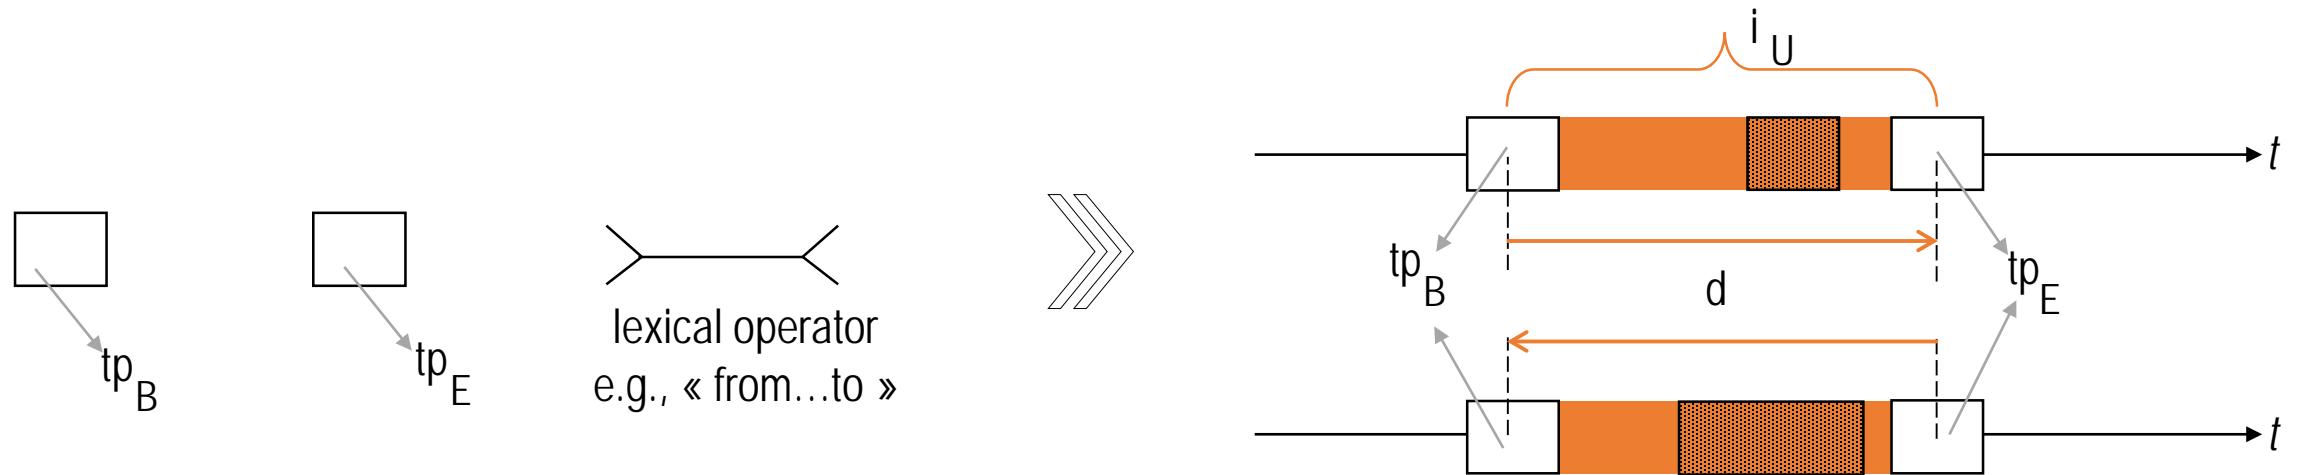

*PertinentIntervalStatement* ( $i_P$ ) is a wording where one only boundary is defined, and by an instance of *NamedTimePeriod* ("WWII", "the great plague", etc.).

Example: [...] remaniements après la Révolution. // [...] rearrangements after the Revolution.

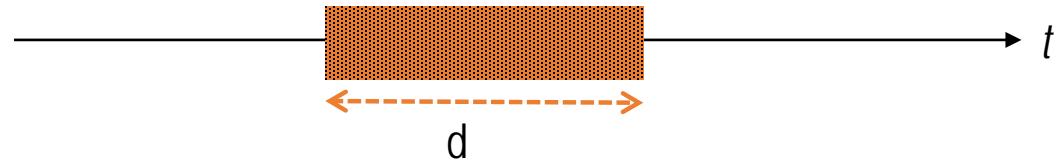

## Interval

*Unfoldable Interval Statement* ( $i_u$ ) is a wording expressed with two *TimePoints*, and where the duration of the occurrence is for sure shorter than the distance separating the two TimePoints.

Example: 1160-1164 [...] seigneurs [...] pour y construire une abbaye [...] acte signé [...]  
 1160-1164 [...] lords [...] to build an abbey [...] deed signed [...]

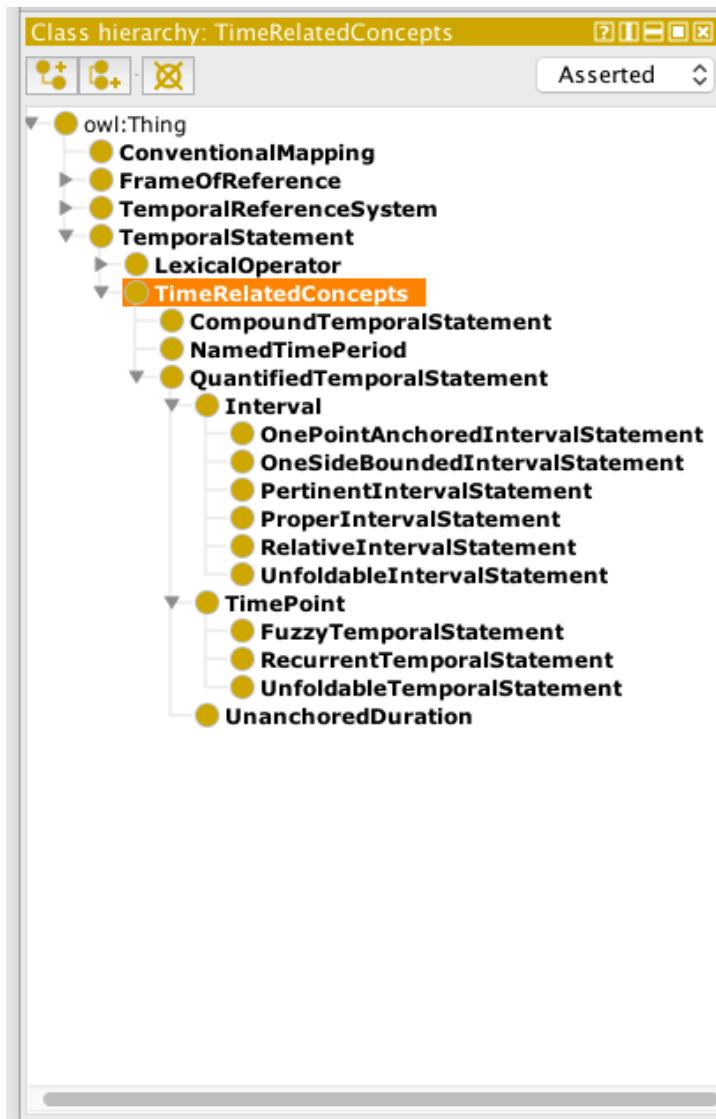

An **UnanchoredDuration** represents any temporal statement that mentions a segment of time with a duration but without explicit boundaries (anchored in time)..”

Example: the renovation lasted for 40 days

**CompoundTemporalStatement** represents cases in which the statement contains two or more alternative indications, may they overlap or not, and may they be consistent in terms of wording or not.

Example: it dates back to the 13th or 14th century

- ➡ 1576 temporal statements
- ➡ Majority: *FuzzyTemporalStatement*
- ➡ 90 *TemporalStatements*: *CompoundTemporalStatement*
  - contradictory indications  
[...] datées du XI<sup>e</sup>me ou du XII<sup>e</sup>me siècle
  - a sort-of caution in the wording  
[...] doit remonter au XVII<sup>e</sup>me siècle (vers 1668-1670)

Test on a significant dataset (in terms of quantity and heterogeneity), but very far from being representative of the CH discourse, and even not representative in the smaller context of the CH discourse on **minor architectural heritage**.

A difficulty to lay down **unambiguous rules** when wanting to populate the ontology.

*Le monastère est fondé vers 960-965 par l'évêque Jean II de Sisteron [...]*

[ProperIntervalStatement](#)

*La commanderie de Saint-Maurice est implantée vers les années 1160 [...]*

[OnePointAnchoredIntervalStatement](#)

Dealing with "contemporary" hints

[The edifice was reconstructed in the last years.](#)

[Are not subject to classification](#)

- formalization efforts **highlight the extreme diversity** of temporal information in the CH discourse
- uncover some significant patterns such as **relative disconnection between lexical operators and temporal granularity.**
- aims at **facilitating the cross-examination** by analysts of historical evidence of ***the temporal evidence itself*** prior to interpretation steps.

- the necessity to
  - validation of the ontology on larger datasets,
  - test its extraction capability in collections where regional and typological parameters are extensively circumscribed.
  
- Future works:
  - applicability of the rules of assignment
  - visualization effort
  - deeper attention to the interdisciplinary issue of elicitation: *not only how a temporal statement is worded but also why*

# TEMPORAL HINTS IN THE CULTURAL HERITAGE DISCOURSE

chapelle érigée en 1684

époque de built 9e siècle Elle fut consacrée en 105

Le monastère est fondé vers 960-965
